

# We need you at the Zoo on the 28th June!

## CROWDFINDERS

**BOOK HERE**

### Crowdfinders. Who'll be in the Zoo in the 28th June?

*Can you believe it? It's just TWO weeks until the amazing and unforgettable Who's Who in the Zoo! Our agenda has been finalized and its going to be an incredible day full of mind-blowing pitches from some of the most prominent SME's around, insider information from the likes of the EIS Association, knowledge on how to manage Brexit from Lord William Hague and plenty of fantastic networking opportunities.... (To give you a small taster!) Also, don't forget the world-class entertainment that will keep us all on our toes!*

**Book Now** with our amazing '25%' discount to grab our last few tickets available.

### Who's Who in the Zoo...? Envestry, that's Who!

Of course, the amazing Envestry will be joining us too... here's what they have to say about themselves...

"Envestry is a secure online funding platform, a confidential space where sophisticated investors and high-growth businesses can connect, share information, secure deals and grow.

You can license Envestry to create your own customised, branded funding platform and unlock a network of sophisticated investors and new opportunities for you and your clients, members and communities."

### Who's Who in the Zoo...? Equipe orbiCALL, that's Who!

"Orbi Network aims to redesign the employment market through a blockchain-based platform that ensures transparency and verified data for both the Independent work-force (Freelancers) and Corporations.

At Orbi.Network we believe that the next frontier and challenge for both corporate and workforce disciplines will be peer-to-peer collaboration. The employment market is highly inefficient in many ways, especially when it comes to trust between parties. Are they solvable? Is she really competent? Are her past experiences and ratings true?

Leveraging on Blockchain technology, at Orbi Network we believe we can create a better, more efficient and trustworthy environment (without relying upon trusting strangers) based on verified and immutable data.

On one side, corporations will have to transform their corporate work environment in order to access a new highly skilled population who work remotely and for their own benefit. To that extent, companies will have to create/use new tools to onboard and manage such a decentralized workforce.

On the other side, freelancers will have to access networking, training and collaborative tools to improve productivity and communication inside a decentralized team."
